*To ICISTS-KAIST

" ICISTS-KAIST brings together minds from different academic and cultural backgrounds, which have the potential to change the world. With an objective to achieve a synergy between Science, Technology, and Society, ICISTS-KAIST encouraged me to come up with solutions of my own to pressing issues. A scintillating experience to cherish forever! Thank you ICISTS-KAIST!"

Manisha Singh, India, KAIST

" ICISTS is an outstanding conference that invites ambitious scientists, artists as well as social scientists to reduce the gaps and encourage collaboration. ICISTS is an effort from students for students, and few other conferences tackle the clashes of different minds, and discuss science and technology applicable to current social issues like they do. ICISTS-KAIST is a rewarding, exciting and most importantly fun experience that will enrich your life."

Francisco Valencia, Mexico

*About ICISTS-KAIST

ICISTS(International Conference for Integration of Science, Technology and Society)-KAIST stands tall as the largest student-organized, international, and interdisciplinary conference in Asia. It pursues a blend of science and society, of technology and sensibility, and of youth and diversity.

Meeting its 10th anniversary, ICISTS-KAIST 2014 will scrutinize science on top of a social and cultural context, and pave way for discussions that envision a better future. On a wonderful five-day journey beginning on August 4th, KAIST campus will once again open doors for future leaders to meet people and get inspired.

*Through ICISTS-KAIST

Meet People

400 participants from over 103 universities and 25 countries
Establish a global network with future leaders
Interact with diverse people through beer party and culture night

Get Inspired

Communicate with arts, sciences, and humanities
Exchange ideas with world-renowned scholars
Engage in academic discussions with speakers and participants

Achieve More

Certificate of participation and souvenirs
Awards for the most exemplary participants
Team project prizes of 1 million Won in total

does science lead progress?

Science, once the shining banner of progress, now stands plagued with doubt. While life devoid of science and technology became unthinkable, biochemical weapons and nuclear disasters speak otherwise. Facing this apparent dichotomy, what we need is a new insight into the workings of science and technology, and their complex interaction with society. Science and technology can no longer pursue solely efficient processes. They must actively take into account values that uphold our society and culture.

ICISTS-KAIST 2014 seeks to become an active ground for communication. The question "Does Science Lead Progress" seems rather simple, but it ultimately leads to a chain of questions that, upon following, would prompt a serious reconsideration of science, technology, our future, and the values that we hold.

Keynote Speech

We look at the big picture of ICISTS-KAIST 2014 and share the perspectives of world-renowned scholars

Parallel Session

Participants get to choose among several lectures held simultaneously on different topics

Discussion Session

Participants and speakers spend time in small groups to answer important questions stemming from the main theme

Culture Night

Participants share each others' cultures through booth activities and amusing performances

Poster Fair

Participants present the outcomes of their team projects as posters, which are evaluated by speakers
